Science in the Middle School!

The Middle School has been really busy this year learning about physical and Earth sciences. We have looked at the four forces of flight, we have studied Earth’s rotation of the sun and are now starting to look at what sources of heat. Have a look at some of the great things we have been doing!

Creating star constellations
Observing the Earth’s rotation

Building egg-a-pults
Identifying sources of heat

Testing the force of drag
Recreating the effect of the sun

Categorizing sources of heat
Designing paper airplanes
